

## Sample Consolidation

### About

The shipping of samples from factories to Europe has been one of the most expensive and polluting parts of the supply chain. Both production and sales samples are usually shipped out with fast courier services. A new process has been created in which part of the samples is being 'slowed down' and put on a consolidated regular air shipment. This process is a smarter way to manage shipments, reducing costs and environmental impact.

### The benefits of Sample Consolidation

- **Lower Cost:** Save up to 30% on shipping expenses.
- **Better Control:** Enjoy reliable and streamlined deliveries.
- **Improved Sustainability:** Contribute to a cleaner world by reducing CO<sub>2</sub> emissions.

### Want to know more?

Do you ship a lot of samples, are you ready to participate or want to learn more?
